Homepage: Popup Info

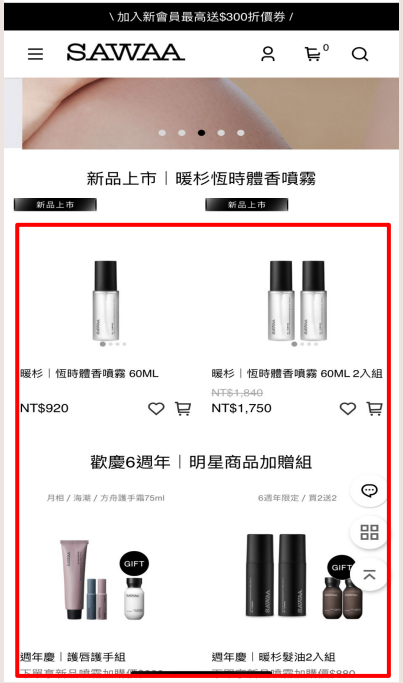

1. Prefer a pop up information when opening the website, and the content can be changed whenever we need.

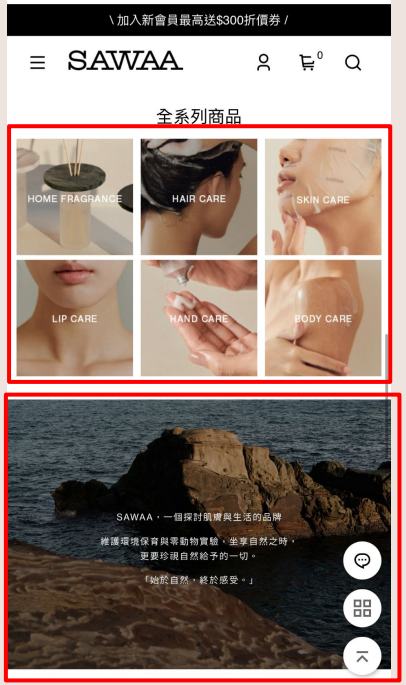

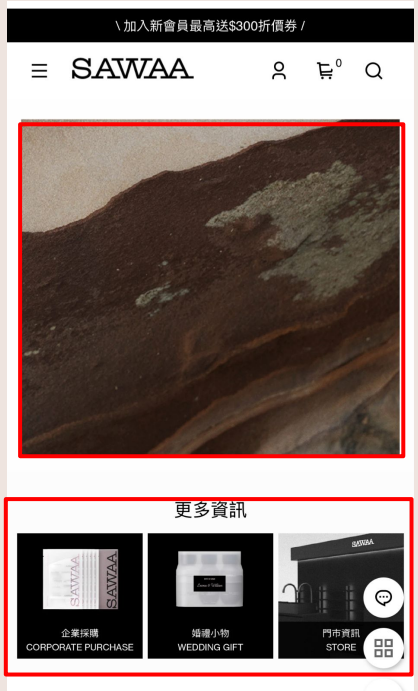

pop up info

Homepage: Banners & Sections

We want to have:
1. Homepage big and small banners
2. Can be automatically swipe itself.
3. Need to support unlimited banners.
4. The content of small banner can be updated at anytime
5. Can add brand videos
6. see red highlight above

We'd like the homepage to:
1. Support multiple **sections** that can be updated through the backend.
2. Each section can have a flexible size and layout, without fixed shape or dimension restrictions.
3. When showing the products, show maximum 4 items in one screen.
4. see red highlight above.

Homepage: Small Icons

1. main menu

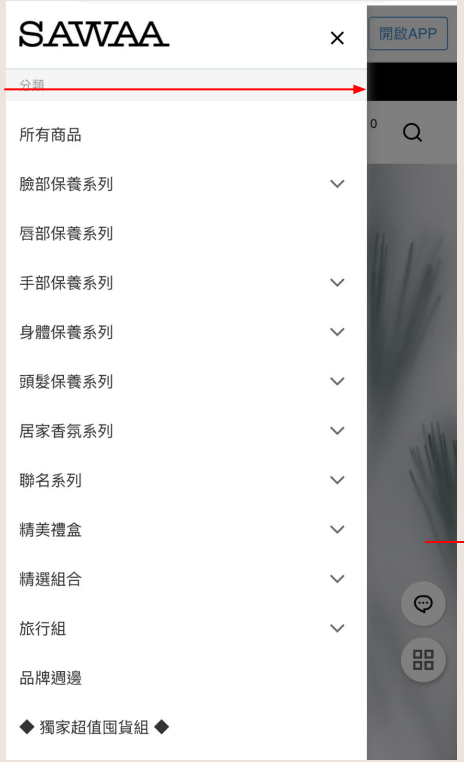

2. members
3. shopping cart
4. search

5. social media.

Small Icons: 1. Main Menu ☰

Size:

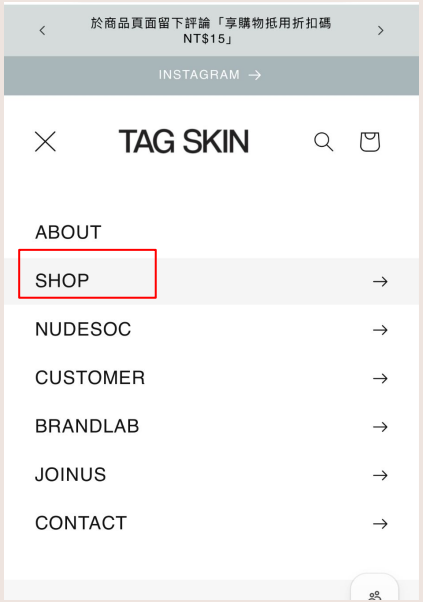

The main menu width size is about ¾ of full page, do not cover all page. (This is the display of mobile phone)

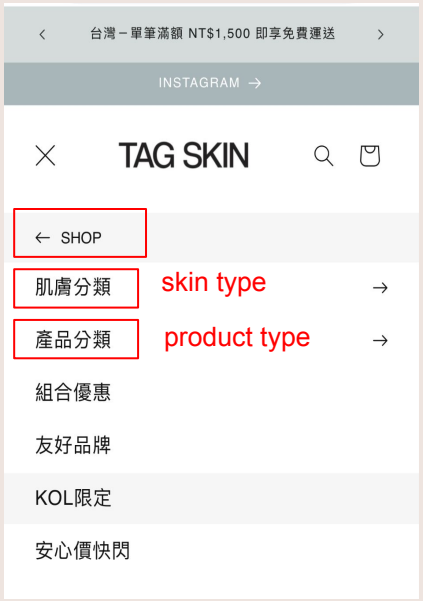

need to see a little bit of homepage.

Small Icons: Main Menu ☰

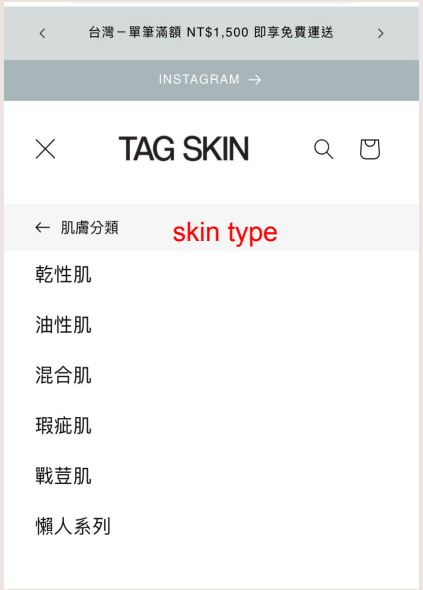

Main Navigation Structure：We would like the main navigation to follow a hierarchical category structure like this. Each main category should be able to contain multiple subcategories, and the backend should allow us to add an unlimited number of subcategories under each main category.

Anti-Fraud Information

Log in or register

Shop as visitor.

1. “Sign in/Sign up” icons that allows customer to sign up through mobile phone or Line chat. We also want customers to be able to shop and pay without being a member or logging in, but we could also track their records and add them as members automatically at backend.

2. If we want to have 3rd party SMS verification code or to have customer set their password, which step should we set up?

Small Icons: Social Media

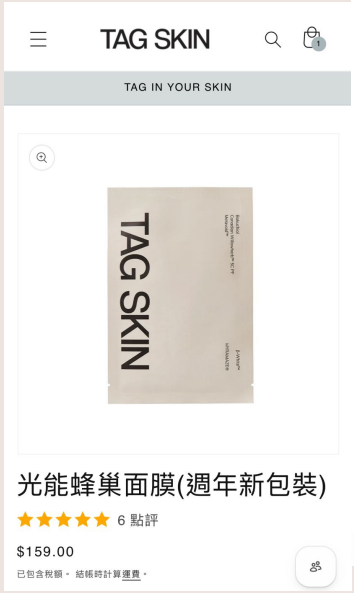

Want to show like this both on pc and mobile phone.

Product Page

We need:

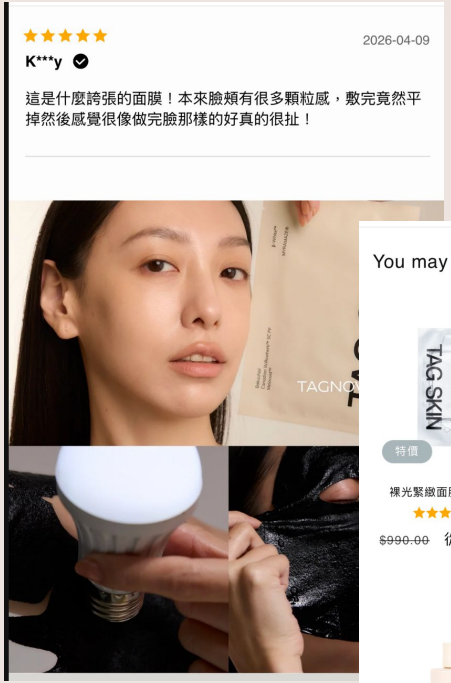

Product pic and produc video, product name, product price.

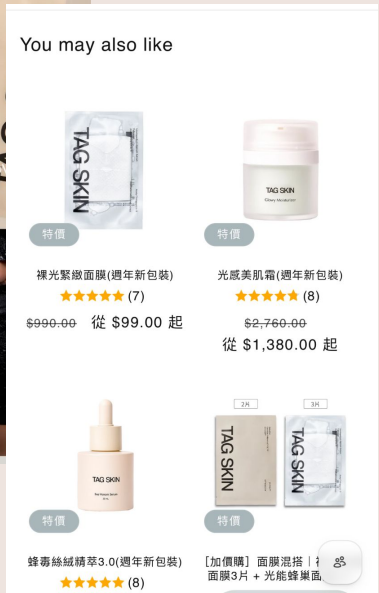

product amount, add to cart, description, ingredients. Allow us to add columns at backend.

allow us to add reviews.

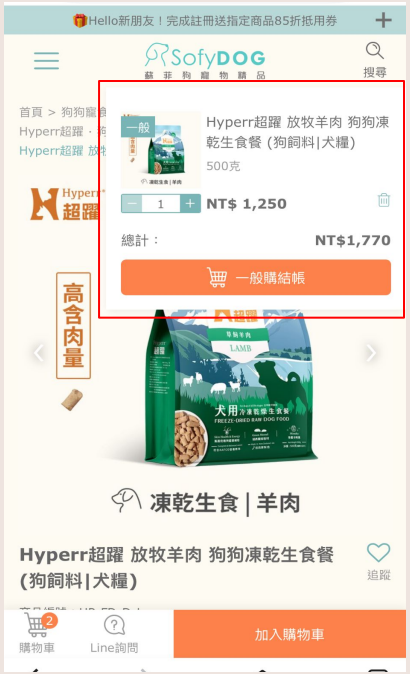

allow us to add more images at back end.

“recommended pairings”, 4 products maximum in one screen.

Order: Cart

When adding an item into cart, there's a pop-up leads to "go to payment"

cart→shipping info→ order complete. **Should be able to go back and change.**

anti fraud

order check & keep shopping

Order: Shipping Inforation→Order Complete

Customers should be able to add products to the cart and select a shipping method before being asked to log in or register.|
The checkout process should support the following payment methods:

- LINE Pay
  Credit Card
  Apple Pay
  ATM / Bank Transfer (via virtual account 虛擬帳號)

Cash on Delivery is not required.

Shipping Method:
- 7-11
- home delivery（宅配)

Customers should be able to complete their purchase without registering an account. When customers enter their personal information during checkout, we would like to explore whether the system can automatically create a member account in the backend, for example by using the customer’s mobile phone number. If possible, we would also like to integrate SMS verification codes for mobile number verification.

we also need a setting for “return goods” and “refund change to store credit” at backend for future use.
